

**DeskPack™**

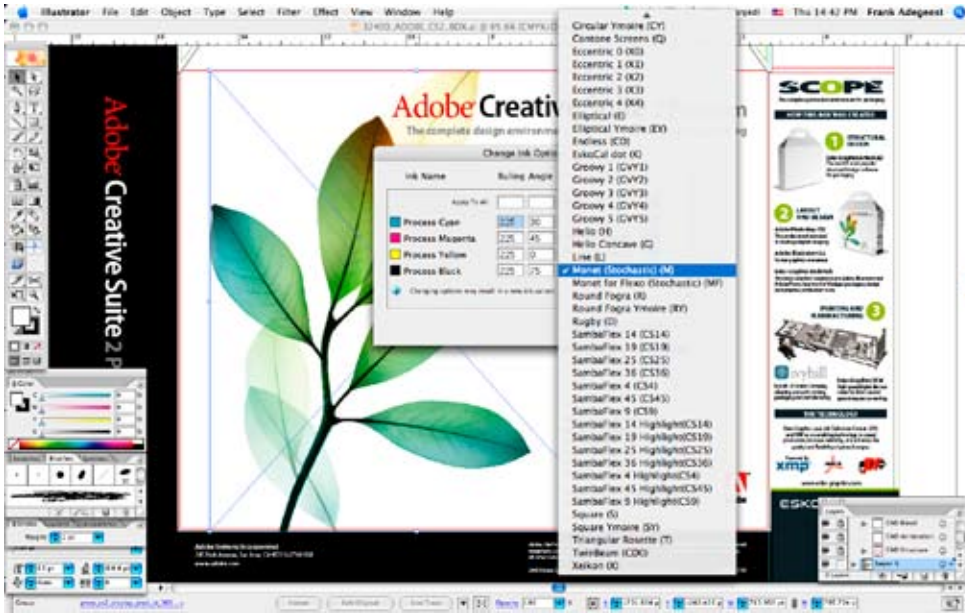

screenX

## Multiple ruling, angle and screening support within single separations

*The standard version of Adobe® Illustrator® can only provide one set of screen parameters (angle, ruling, dot shape) per ink/separation. screenX is a plug-in tool for Adobe Illustrator that allows object-based components to have multiple rulings and/or multiple angles or screening technologies within a single separation. The use of these mixtures is quite common in packaging jobs. screenX can also be used as a tool to apply specific DGC (Dot Gain Compensation) settings, a utility supported by the Esko FlexRip and the Agfa Apogee workflow systems.*

*Example of a single separation containing multiple types of screening (circular, square and Monet).*

screenX's object based ink property manager. Simply select an object and apply the settings through screenX.
